

About 80% of people living with diabetes for at least 15 years will develop diabetic retinopathy,¹ a leading cause of vision loss and blindness. Early detection and treatment can reduce the risk of blindness by 95%.²

MinuteClinic® within a CVS® HealthHUB™ location conveniently offers diabetic retinal exams seven days a week, including evenings.

By offering your employees annual diabetic retinal exams at a MinuteClinic in a CVS HealthHUB location, you could help reduce vision loss and help to improve health outcomes.

How we help deliver a convenient, more affordable solution

Exam. Retinal images are captured at a local MinuteClinic within a CVS HealthHUB using the advanced Welch Allyn® RetinaVue® 700 Imager from Hillrom.

Analyze. Images are sent to a board-certified ophthalmologist for analysis and diagnostic report creation.

Report. Exam results are returned in about 24 hours and, if the patient consents, the results — as well as a complete diagnostic report and a referral plan — are shared with their primary care physician.

Aetna is the brand name used for products and services provided by one or more of the Aetna group of companies, including Aetna Life Insurance Company and its affiliates (Aetna).

Aetna®, CVS Pharmacy® Inc., which owns CVS® HealthHUB™ locations, and MinuteClinic®, LLC (which either operates or provides certain management support services to MinuteClinic-branded walk-in clinics) are part of the CVS Health® family of companies.

CVS® HealthHUB™ services are available only in select stores and the services offered may vary by location. See your CVS HealthHUB store for details. Pharmacy services provided by CVS Pharmacy®, Inc. Clinical services within a CVS HealthHUB location provided by a MinuteClinic® nurse practitioner or physician assistant except if otherwise indicated.

Diabetic retinopathy diagnosis is performed by an independent provider. On average, exam results are returned in 24 hours.

The Welch Allyn RetinaVue 700 Imager (RV700) is a high-resolution ophthalmic camera used to acquire, save and transmit digital images of the human eye. Anterior and posterior ocular structures such as the surface of the eye, cornea and fundus, including the retina, macula and optic disc, can be imaged. It is a prescription use-only medical device.

The Welch Allyn RetinaVue Network is a web-based software system application intended for use in storing, managing and displaying patient data, diagnostic data and images from computerized diagnostic instruments. Original and enhanced images can be viewed by trained health care professionals.
